

Mongodb-Aggregation Assignments2:

Atlanta Population

1. use `db.zipcodes.find()` to filter results to only the results where city is ATLANTA and state is GA.
2. use `db.zipcodes.aggregate` with `$match` to do the same as above.
3. use `$group` to count the number of zip codes in Atlanta.
4. use `$group` to find the total population in Atlanta

```
